

Self-Test Plan

Test every feature yourself — step by step, in your browser

Work through each test in order. For every row: do the steps, check the result matches "Expected," and tick the box. If something fails, note the test ID and what you saw.

Before you start — launch the app

1. Open a terminal in your app folder: `cd "C:\Users\Jherico\Downloads\command-hq-feature-chat-memory-and-ui-updates (2)"`

2. Start it: `php spark serve` (leave this window open the whole time)

3. Open your browser to `http://localhost:8080`

Always use the **(2)** folder — it has the working keys and all features. Don't double-click an HTML file; the app must be opened through the running server at `localhost:8080`.

Section A — Basics

ID	What you're testing	Steps	Expected result	✓
A1	Dashboard loads <code>UI</code>	Open <code>localhost:8080</code>	The org chart / company dashboard appears with agents (no blank page or error).	☐
A2	Open an agent <code>UI</code>	Click any agent (e.g. Master Brain)	A chat window opens for that agent.	☐
A3	Chat / prompting <code>core</code>	Type Hi, are you online? and send	The agent replies within a few seconds (e.g. "Online and ready").	☐
A4	Streaming <code>core</code>	Send Write 3 short tips for productivity.	The reply appears <i>word-by-word</i> as it types (not all at once).	☐

A5	Memory core	Send Remember my favorite color is teal. then send What's my favorite color?	The agent answers "teal" — it remembered the earlier message.	☐
A6	History persists core	Refresh the page, reopen the same agent	Your earlier messages are still shown.	☐

Section B — Skills

ID	What you're testing	Steps	Expected result	✓
B1	View skills UI	In an agent's panel, open the Skills tab/section	You see the list of available skills and which are assigned.	☐
B2	Create a skill UI	In settings/skills, create a skill: name "Test Skill", context "Always be concise."	The new skill appears in the list.	☐
B3	Assign a skill UI	Assign "Test Skill" to an agent	It shows as assigned on that agent.	☐
B4	Skill takes effect core	Chat with that agent and notice its behavior follows the skill	The agent's replies reflect the skill's instruction (e.g. more concise).	☐
B5	Remove / delete skill UI	Unassign, then delete "Test Skill"	It's removed from the agent and the list.	☐

Section C — Agent Tools (type these to any agent)

These are real actions. Type the message, then watch the reply for a "tool result" / confirmation. Use a capable agent like **Master Brain** or **CEO**.

ID	Tool	What to type	Expected result	✓
C1	Web Search	Search the web for the latest AI news and summarize.	Reply includes real, current search results / links.	☐
C2	Send Email	Send an email to YOUR@email.com, subject "Test", body "Hello from Mosbat AI".	"Email sent successfully" — and the email arrives in that inbox.	☐
C3	Check Site	Check our website https://www.positivenation.org and give a status report.	A status report: pages load, SSL valid, no 404s.	☐
C4	Check Whole Site	Do a full QA of every page on https://www.positivenation.org	Reports all pages scanned (~40) with status for each.	☐
C5	Post to Facebook (text)	Post on our Facebook page: Hello from Positive Nation! 🍀	"Posted to Facebook Page successfully" — and it appears on the Page.	☐
C6	Generate Document	Create a document titled "Weekly Plan" with 3 bullet points.	"Document saved" with a link; opens as a printable file.	☐
C7	Generate Word/Excel/PPT	Create a Word document titled "Report" about our progress.	"Word document saved" with a .docx link.	☐
C8	Create Task	Create a task for the CFO to review this month's budget, priority high.	"Task created successfully," assigned to the CFO.	☐
C9	Hire Agent	Hire a new agent named "Research Helper", role Research Assistant, reporting to CFO.	"Agent hired successfully" — appears in the org after refresh.	☐

C10	Fire / Deactivate Agent	Deactivate the Research Helper agent.	"Deactivated" — the agent is removed/greyed (reversible).	☐
C11	Generate Image <code>slow</code>	Generate an image of a calm sunrise.	An image is produced. Note: this is currently slow — may take 20–60s or time out (see Known Issues).	☐
C12	Post image to FB <code>slow</code>	Post on our Facebook page with an image: a calming mental health message and an image_prompt of a peaceful sunrise.	Posts with an image — may stall due to image speed (see Known Issues).	☐

Section D — Scheduled Reports (run in the terminal)

Open a second terminal in the (2) folder for these.

ID	Feature	Command	Expected result	✓
D1	Daily board report (preview)	<code>php spark report:board --dry</code>	Prints a per-company report (Status / Problems / Fixed / Recommendations). Does NOT email.	☐
D2	Daily board report (email)	<code>php spark report:board</code>	"Email sent successfully" — report arrives at the Chairman email.	☐
D3	Trial report to any email	<code>php spark report:trial --email YOUR@email.com</code>	A single report emailed to that address.	☐
D4	Heartbeat check-in	<code>php spark heartbeat:run</code>	Generates and saves a daily summary report.	☐
D5	Auto-schedule (9 AM)	Check Windows Task Scheduler for "MosbatAI Daily Board Report"	Task exists, status Ready, next run 9:00 AM.	☐

Known issues — expected behavior, not bugs

Image generation is slow / may time out. The free image service is currently down and there's no OpenAI key, so the app uses a slow local fallback. Tests **C11** and **C12** may hang or fail —

this is the one known gap. Everything that *uses* an existing image (posting, documents) still works.
Fix: add an OpenAI key or enable the instant local renderer.

If chat doesn't reply at all: you're likely running the wrong folder. Stop the server, make sure you're in the **(2)** folder, and run `php spark serve` again. The **(2)** folder has the valid API key and Facebook credentials.

How to report results

For anything that fails, note: the **Test ID** (e.g. C2), **what you typed**, and **what you saw** (the exact error or wrong behavior). A screenshot helps. Send that list back and it can be fixed quickly.

Mosbat AI · Command HQ — Self-Test Plan. Run from the (2) folder at localhost:8080.
